

# Paper

- Pick a family or larger taxonomic group if appropriate. You must approve this with me to avoid duplicates.
- Find three peer-reviewed papers dealing with the ecology, biogeography, systematics or behavior...
- Your paper should include the following
  - Summary of the groups taxonomy, diversity and biogeography (how many species, where do they occur etc.).
  - Discussion of the conservation status of the group.
  - Distinction between this group and some close relatives.
  - Summary and discussion of the papers you selected.
- Structure the paper however you want. However, you must properly cite all sources.
- Graduate students – present a 20 minute presentation over the group.
